Graph the following equations on https://www.geogebra.org/3d?lang=en ( z -axis is blue, y -axis is green, and x -axis is red). Sketch the graph you see on your paper and make some observations about the sketch as it corresponds to the equation. Think about the questions; What do you notice? What do you wonder? What patterns can we start to see appearing? Why might that equation produce that graph? What "controls" the graph (is a particular part taking over)? Once you start noticing patterns try to sketch the graph BEFORE you type it into Geogebra.
